

AssetControlOne

AssetControlOne

If every time you consider the asset inventory control, you feel a big headache, then AssetControlOne may be the answer for you!

e-Motion invested all its experience in designing a clear, user friendly, intuitive interface Asset-Control program where you can count your goods, record the locations and status, re-label on site, and most powerful, associate on-the-fly a serial number to a previously unidentified item.

AssetControlOne provides you, in a single touch, with a report showing controlled items or, on the contrary, missing goods and when/where was the last checking...

With AssetControlOne, doing an inventory control becomes easier and much faster than anything before.

Advanced users can appreciate its flexibility to integrate with sophisticated Asset Management programs. Data are stored in a MS SQL database. Data may be exchanged either through flat text files or within an integrated backend.

AssetControlOne takes now advantage of state-of-the-art RF tags providing even easier control procedures reducing asset manipulation...

AssetControlOne has a *Monitor* allowing data manipulation and basic reports:

- adding items, assets, locations
- generating quick (customized) reports
- integrating (import/export) data exchange
- ...

For users who wish to run a stand-alone application that provides, next to the inventory control, acquisition, depreciation, disposal and maintenance follow-up, AssetControlOne is fully integrated with PIMS Fixed-Assets program, an easy yet powerful program dedicated to assets management.

Features Summary

- Accepts Countable items and Specimens
- Allocates Department, Location and User to each Asset
- Records Status, Date and Manufacturer Serial Number
- Allows the creation of new assets during the inventory
- Allows a direct reprint of a (missing or damaged) label
- Generates a report by location of the controlled items or the unmatched items

Backend (Optional)

- AssetControlOne Monitor is a basic tool to display raw data coming from the handheld devices, generate customized reports, and exchange data with the Asset Management Program.
- PIMS Fixed Assets is a comprehensive module that manages easily and efficiently the assets including the acquisition, inventory, depreciation and disposal.

The screenshot displays the 'Fixed Assets' application window. A 'Main Menu' overlay is visible with buttons for 'Log In', 'Load Ref', 'Send Data', 'Load Asset', and 'End'. The background shows a data entry form for an asset with the following details:

Department	FINANCE	
Location	BLDG A FLR 3	
User	...	
Ass. S/N.	000224	
Code	FUR.DSK.01	
Description	Exec Desk Mogono 180	
Man. S/N.	...	
	Gold Furniture	
	...	
Should be Moved	1 0	
Good	...	
Prev	List	Save

Below the form is a table listing assets:

code	name	location	Group
-017	Personal Computer HP	MAIN	STANDARD
-018	Personal Computer HP	MAIN	STANDARD
-019	Personal Computer		
020	Personal Computer		
SCREEN	Screens		
15	Screen 15 inch		
17	Screen 17 inch		
TABLE	Conference Table		
TOOLS	Hardware & Tools		

At the bottom, there is a 'properties' section with 'Has Serial' and 'Countable' checkboxes, and a 'barcode' field. A status bar at the bottom shows 'totally unusable' and 'excellent condition' with corresponding icons.
